

The Philips Pronto TSU9200

A modern classic personalized for you

pr@nto

PHILIPS

sense and simplicity

It's your home, your choices and your style.

The Pronto TSU9200 offers the best of both worlds: a classic remote feel combined with innovative personalized control possibilities. Designed for intuitive navigation, just select what you want to do and the Pronto TSU9200 does the rest.

Customized convenience

Like the other Pronto control solutions, the TSU9200 is programmable. Your installer can design a perfect user interface that suits your taste and your system. You control it all with four operational modes, traditional buttons and screen-based interfacing, using a rotary dial and corresponding 'select and check' key. What you get is an easy-to-use screen-based interface with channel icons tailored precisely to your needs.

Stylish one-hand control

Designed to mold to the palm of the hand, the glossy-black Pronto TSU9200 features a 2-inch color LCD screen. It is perfectly structured with the right balance of hard buttons for traditional key functions and on-screen 'select and check' interfacing with a rotary wheel and execution button. Details like a color LCD screen, white backlighting, laser-engraved buttons, and a minimalist docking station complete the package.

Intuitive navigation

The Pronto TSU9200 keeps it simple with four clear operation modes: Media, Home, Favorites (FAV) and More. Media lets you interact with digital music files on your computer with the optional PCX9200. Home offers a selection of activities like 'watch a DVD' or 'listen to PC'. Favorites (FAV) lists your preferred television and radio stations by channel icon and More accesses advanced features like your television's ambilight control or TeleText functions.

Corresponding extenders

The Pronto TSU9200 can be extended to full non-line-of-site control. Just ask your installer to integrate a RFX9200 for seamless non-line-of-sight control. These subtle extenders can be easily hidden or even used in a multi-room control solution. Add a PCX9200 extender for two-way control for Windows and Windows Vista Media Center as well as Windows Media Player and iTunes. A great way to interact with your entire digital music library right on the LCD screen.
